Enumerative Combinatorics and Applications
University of Haifa – Virtual – September 4-6, 2023

MY FAVORITE POSETS

RICHARD STANLEY

Department of Mathematics, Massachusetts Institute of Technology, USA

Partially ordered sets (posets) have been one of my main research interests since graduate school. There is a huge variety of fascinating examples of posets, with connections to enumerative combinatorics, graph theory, hyperplane arrangements, representation theory, algebraic topology, commutative algebra, algebraic geometry, number theory and other areas. I will discuss some of my favorite examples.
